Breast Cancer Screening Measurement

Description
Age: 50-74
Diagnosis: none required
Gender: Female
Preventive Care: Mammo
Measure: Patient must complete mammogram every 2 years.

Making Complete
The Preventive Care is made complete when the Mammogram document type is filed in the patient's chart. In your document manager, click on the yellow file folder to file the document in the patient's chart, select patient, add date, Select Document Type, choose Radiology, then choose Mammogram. If the mammogram was done more than 2 years ago it will not make the Preventive Care complete.
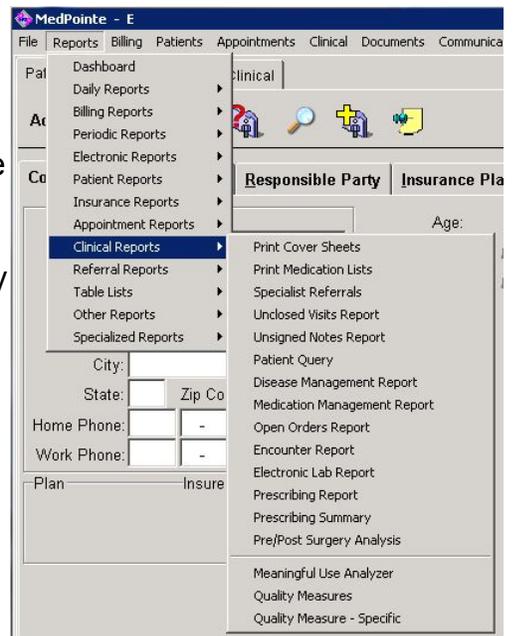

Now that the document is filed in the patients chart, the Preventive Care will display as complete (you may need to exit that patient's chart and re-open the chart to refresh the Preventive Care). Remember, it is only the document type Mammogram that triggers this measure, if you create new document types that you would like to use to trigger the measure, they need to be added in the Preventive Care Set Up.

Note: Once the mammogram ages beyond 2 years the Preventive Care will revert back to incomplete. To avoid this measure reverting to incomplete, a newer mammogram needs to be correctly filed in the patient's chart.

Reporting
To extract the denominator and numerator for reporting, you will use a report from the Report Menu. The reports allow you to mine the patient data in numerous ways, but for this purpose we are going to use the Quality Measure-Specific Report. Click on the Reports Menu, then choose Clinical Reports, then click on Quality Measure-Specific (the last one down).

Select Provider.

Enter date range you would like to assess.

Minimum # of visits needs to be 0, this is the number of visits for that date range, and must be 0 to capture all active patients that meet the criteria.

Enter age range; for this measure the range is 50-74.

Change Sex from Unspecified to Female.

The combined date range, # of visits, age range , and sex is your Denominator.

Qualify Measures

☐ Medicare Patients Only (req'd for PQRS)
☐ Show Detailed List of Patients

Report Name:

Patient Population (Denominator)

Visit Criteria
Visit Period: from 01/01/17 thru 01/31/17
Minimum # of Visits: 0
Other Info: Unspecified

Patient Criteria
Patient Age: from 50 thru 74
☐ Smoker
Sex: Female
Diagnosis Set: Unspecified
Diagnosis from: ⦿ Problem List ◯ Visit (acute)

Matching Patients (Numerator)
Preventive Care Met: Mammogram
Diagnosis Set: Unspecified
Medication Set: Unspecified
Procedure Set: Unspecified
Other Info: Unspecified

[OK]   [Exit]

For the Numerator, pull down the Preventive Care Met menu and choose Mammogram. This will pull data from the Mammo Preventive Care in the chart.

The report will generate the denominator, the numerator, and the percentage complete. This is the data that should be added to the spreadsheet for Aspirus.
